

Cancel claims 2, 4, and 6 without prejudice.

Please amend claims 1 through 8 as follows:

Claim 1. (Currently Amended) A spunbond fabric having excellent softness and strength, made from the spunbond process, including:

(a) extruding filaments ~~composed consisting of at least one component of~~ an ultra low viscosity polypropylene polymeric resin having a melt flow rate in grams/10 minutes at 230 degrees Centigrade ~~greater than 200 and preferably between 350 MFR and 750 MFR~~ from a spinneret;

(b) drawing said filaments through a drawing unit;

(c) generating a filament speed above 4,000 meters per minute; and

(d) creating a fabric ~~consisting of at least one layer or more layers of from said filaments drawn from said drawing unit extruded using the same melt flow rate resins between 350 and 750.~~

Claim 2. (Cancelled) A spunbond fabric as in claim 1, including the additional step of:

(e) creating a multiple layer composite fabric containing the layer of said filaments received from said drawing unit.

Claim 3 (Currently Amended) A spunbond fabric having excellent softness, strength, barrier properties and air breathability made from the spunbond process, including:

(a) extruding filaments ~~composed consisting of at least one component of~~ polyethylene terephthalate resins with IV (intrinsic viscosity) of less than 0.55 from a spinneret;

(b) drawing said filaments through a drawing unit;

- (c) generating filament speeds above 4,000 meters per minute; and
- (d) creating a fabric from ~~at least one or more layers~~ layer of said filaments using the same resins.

Claim 4. (Cancelled) A spunbond fabric as in claim 3, including the step of:
providing additional layers of filaments on said one layer of filaments to create a multiple layer composite fabric therefrom.

Claim 5. (Currently Amended) A spunbond fabric having excellent softness, strength, barrier properties, and air breathability made from a spunbond process, including the steps of:

- (a) extruding filaments ~~composed consisting of at least one component of~~ polyamide (PA6 nylon 6) of a R.V. (relative viscosity) below 2.2 from a spinneret;
- (b) drawing said filaments through a drawing unit;
- (c) generating a filament speed above 4,000 meters per minute; and
- (d) forming a fabric ~~consisting of at least one or more layers~~ layer from said ~~of similar~~ filaments having a R.V. below 2.2 drawn from said unit.

Claim 6. (Cancelled) A spunbond fabric as in claim 5, including the additional step of:
(e) creating a multiple layer fabric containing the layer of said filaments received from said drawing unit.

Claim 7. (Currently Amended) A spunbond fabric having excellent softness, barrier properties, and air breathability made from a spunbond process, including the steps of:

- (a) extruding filaments ~~consisting composed of at least one component of~~ polyethylene resin with a mass flow rate MFR between 250 and 750 grams over 200 and preferably between 350 and 750 grams/10 minutes at 230 degrees Centigrade from a spinneret;
- (b) drawing said filaments through a drawing unit; and
- (c) forming a fabric ~~consisting of at least one or more layers layer~~ from said filaments using the same resins drawn from said unit.

Claim 8. (Currently Amended) A spunbond fabric as in claim 7, including the additional step of:

- (d) creating a multiple layer ~~composite fabric consisting of layers containing the layer~~ of said filaments of the same resins received from said drawing unit.
